EXPERIENCE

Meridial by Invisible **Freelance Software Engineer** May 2025 - Present

- Developed scalable full-stack web applications using React, Node.js, JavaScript, and SQL databases, delivering responsive and maintainable business solutions.
- Designed and optimized relational database schemas, SQL queries, and RESTful APIs to support secure, high-performance data-driven applications.
- Built data processing workflows to collect, transform, and validate business data for reporting, analytics, and operational insights.
- Integrated AI-powered features and external REST APIs while leveraging GitHub Copilot and Cursor to accelerate development, improve code quality, and streamline debugging.
- Improved application scalability and performance through API optimization, efficient database design, query tuning, and indexing strategies.
- Collaborated in Agile development environments using Git version control, participating in requirements analysis, testing, code reviews, and continuous delivery.

Auxis **Jr. Appeals Specialist** Jul 2024 - Present

- Analyzed complex healthcare claims and insurance documentation to identify discrepancies, determine root causes, and resolve denied claims.
- Reviewed and validated large volumes of medical and financial data while ensuring accuracy, consistency, and compliance with established guidelines.
- Investigated case-specific issues by evaluating multiple data sources and applying analytical problem-solving techniques.

Grupo Marta **Full Stack Developer (Internship)** Oct 2023 - Dec 2023

- Lead the design, development, and deployment of a full-stack survey web application to collect and analyze employee data across multiple companies
- Built the frontend using HTML, CSS, and JavaScript, and developed the backend with PHP and SQL
- Designed and implemented a normalized relational database in MySQL to ensure efficient data storage and reporting
- Developed features for data entry, validation, and analytics, improving data accuracy and usability for end users
- Integrated frontend and backend components to create a complete data-driven system

PROJECTS

BeReposible - Personal Finance Management App

- Developing a cross-platform personal finance management application using React Native and Expo.
- Designing an intuitive mobile interface to help users manage income, expenses, savings, recurring payments, debts, and financial goals.
- Implementing financial planning features to help users track budgets, monitor savings progress, and plan long-term goals.
- Designing the application architecture with a future Node.js REST API and secure database integration.
- Applying responsive UI/UX principles to provide a consistent experience across Android and iOS.

Automotive Inventory System – React + Node.js.

- Designed and developed a web-based inventory management system for automotive companies using React, Node.js, tailwind and MySQL.
- Implemented inventory tracking, product management, and stock control to improve inventory accuracy and operational efficiency.
- Developed CRUD modules for vehicles, spare parts, suppliers, and customers with data validation and role-based access.
- Integrated authentication and authorization features to secure user access and administrative operations.
- Designed a relational database applying normalization principles to ensure data integrity and efficient query performance.

MiniOS Simulator – React + Node.js.

- Designed and developed an interactive operating system simulator with a graphical desktop environment and executable applications.
- Implemented process scheduling algorithms (e.g., FCFS, Round Robin, Priority) to simulate CPU task execution and management.
- Simulated memory management concepts, including paging and page allocation, with real-time visualization of memory usage.
- Developed system resource monitoring for CPU, RAM, and disk utilization, providing live performance metrics.
- Applied object-oriented programming principles to model processes, resources, and operating system components.
- Built an educational interface to demonstrate core operating system concepts through interactive simulations.

EDUCATION

2021 - 2023 Colegio Técnico Profesional Abelardo Bonilla Baldares
Technician on Computer Science focused on Software Development

2024 - 2026 Universidad Autónoma de Centro América
Bachelor in Computer Systems Engineering

TECHNICAL SKILLS

- Languages: JavaScript, C#, Python, SQL, Java, PHP
- Frontend: React, HTML, CSS
- Backend: Node.js, Express, ASP.NET
- Databases: MySQL, SQL Server, Oracle
- Tools & Cloud: Git, GitHub, VS Code, Visual Studio, Cursor, Oracle Cloud, Dell Boomi

LANGUAGES

- Spanish: Native
- English: Advanced (C2 EF Test Certified)
- Portuguese(BR): Intermediate (B1, currently learning)

CERTIFICATIONS/COURSES

Harvard – CS50 Introduction to Computer Science (2025)
Microsoft - Use AI-assisted coding with GitHub Copilot (2026)
freeCodeCamp – JavaScript Algorithms and Data Structures (2026)
freeCodeCamp – Front End Development Libraries (React) (2026)
PI institute– Python Essentials (2026)
Oracle - Cloud Infrastructure Foundations (2026)
Microsoft – Get started with Microsoft data analytics (BI & Fabric) (2026)
Boomi - Professional Integration Developer(2026)
Fortinet – Network Security Expert (2025)
Microsoft - AI concepts for developers and technology professionals (2026)
Microsoft - Introduction to Microsoft Azure Data Fundamentals (2026)
Auxis— AI leadership and Transformation (2026)
CFI— AI powered Scenario Analysis (2026)
Auxis— AI Essentials (2026)
