

EXPERIENCE

Meridial by Invisible

Freelance Software Engineer

March 2026 - Present

- Built scalable full-stack web applications using modern frontend and backend technologies.
- Integrated AI-powered solutions using Large Language Models (LLMs) and REST APIs.
- Designed secure authentication, database architecture, and backend services for business applications.
- Optimized application performance through efficient database queries and API design.
- Delivered custom software solutions following Agile development practices.

Auxis

Jr. Appeals Specialist

Jul 2024 - Present

- Analyzed complex healthcare claims and insurance documentation to identify discrepancies, determine root causes, and resolve denied claims.
- Reviewed and validated large volumes of medical and financial data while ensuring accuracy, consistency, and compliance with established guidelines.
- Investigated case-specific issues by evaluating multiple data sources and applying analytical problem-solving techniques.
- Collaborated with cross-functional teams to resolve documentation and process issues, improving case resolution efficiency.
- Maintained high levels of accuracy while managing time-sensitive workloads in a fast-paced environment.

Grupo Marta

Full Stack Developer (Internship)

Oct 2023 - Dec 2023

- Lead the design, development, and deployment of a full-stack survey web application to collect and analyze employee data across multiple companies
- Built the frontend using HTML, CSS, and JavaScript, and developed the backend with PHP and SQL
- Designed and implemented a normalized relational database in MySQL to ensure efficient data storage and reporting
- Developed features for data entry, validation, and analytics, improving data accuracy and usability for end users
- Integrated frontend and backend components to create a complete data-driven system
- Provided basic technical support to ensure system continuity, including software installation, troubleshooting, and infrastructure maintenance for client environments

EDUCATION

2018 - 2023 Colegio Técnico Profesional Abelardo Bonilla Baldares
Highschool Graduate

2021 - 2023 Colegio Técnico Profesional Abelardo Bonilla Baldares
Technician on Computer Science focused on Software Development

2024 - 2026 Universidad Autónoma de Centro América
Bachelor in Computer Systems Engineering

TECHNICAL SKILLS

- Languages: C#, Java, Python, PHP, JavaScript
- Frameworks: Laravel, React, Node.js, Express
- Databases: MySQL, SQL Server, Oracle Database
- Tools & Cloud: Git, GitHub, Visual Studio, VS Code, Oracle Cloud, Dell Boomi
- Practices: REST APIs, CI/CD, OOP, Agile

LANGUAGES

- Spanish: Native
- English: Advanced (C2 EF Test / C1 BELT Test)
- Portuguese(BR): Intermediate (B1, currently learning)

2D Multiplayer Battle Royale – Unity, C#

PROJECTS

- Designed and developed core gameplay systems for a 2D battle royale game
- Implemented directional dash mechanics based on player orientation
- Developed combat systems (projectiles, cooldowns, abilities)
- Designed ships with distinct stats, abilities, and playstyles
- Created game maps with emphasis on balance, navigation, and combat dynamics
- Applied object-oriented programming principles to structure game logic
- Managed physics, events, and update cycles within Unity

Automotive Inventory System – React + Node.js.

- Designed and developed a web-based inventory management system for automotive companies using React, Node.js and MySQL.
- Implemented inventory tracking, product management, and stock control to improve inventory accuracy and operational efficiency.
- Developed CRUD modules for vehicles, spare parts, suppliers, and customers with data validation and role-based access.
- Integrated authentication and authorization features to secure user access and administrative operations.
- Designed a relational database applying normalization principles to ensure data integrity and efficient query performance.
- Built a responsive user interface to streamline inventory management and reporting workflows.

MiniOS Simulator – C#

- Designed and developed an interactive operating system simulator with a graphical desktop environment and executable applications.
- Implemented process scheduling algorithms (e.g., FCFS, Round Robin, Priority) to simulate CPU task execution and management.
- Simulated memory management concepts, including paging and page allocation, with real-time visualization of memory usage.
- Developed system resource monitoring for CPU, RAM, and disk utilization, providing live performance metrics.
- Applied object-oriented programming principles to model processes, resources, and operating system components.
- Built an educational interface to demonstrate core operating system concepts through interactive simulations.

CERTIFICATIONS

- Harvard – CS50 Introduction to Computer Science (2025)
- Oracle - Cloud Infrastructure Foundations (2026)
- Fortinet – Network Security Expert (2025)
- freeCodeCamp – JavaScript Algorithms and Data Structures (2026)
- Boomi - Professional Integration Developer(2026)
- freeCodeCamp – Front End Development Libraries (React) (2026)
- PI institute– Python Essentials (2026)
-
- Microsoft - Use AI-assisted coding with GitHub Copilot (2026)
